Low & High-Fidelity Prototypes

I started from my previous shopping cart design from HW3 and considered requirement for product selection. The picture above is my original design from HW3.

The picture above is my detailed product page from HW5. To let users customize both color and filling, I kept the color selection and changed the size selection to different fillings.

1. Low-Fidelity for shopping cart page and new detailed product page
My design choice is to keep it consistent based on my whole design, so I deleted some information to be options that users can select when browsing. As for shopping cart, my goal is to present only the most important information.

2. High- Fidelity for shopping cart and detailed product pages

This is my digital mockup for the new design of detailed product pages, I removed the list of different features and fillings and added new filling selection.

This is the new shopping cart mockup, I added the color and filling users select to add to the cart so that they can confirm what they buy before they check out.
